The S-Ray automotive entertainment system

The S-Ray automotive entertainment system takes advantage of all available media and broadcast services and combines them into a double-din, w/LCD screen, in dash system for the vehicle.

The device plays and records DVD, DVD/R, Flash storage, CD-Rom and CD/RW media.

It receives and allows the user to record from, AM/FM/XM and TV broadcast as well as from one type of media to another using an onboard hard disc drive storage system. The system is modular which allows distributors to custom design the entertainment system to meet a customers needs as well as allow easy future upgrades to new media and broadcast types along with a voice interactive system control interface.
